

MEME / SOLANA / TAO-PAIRED REWARD TOKEN

BUTT

BUTTENSOR

A TOKEN-2022 MEMECOIN WHOSE TAO-QUOTED MARKET, AUTOMATIC HOLDER REWARDS AND PLATFORM BURN FLYWHEEL CREATE THREE SEPARATE ECONOMIC EFFECTS.

NETWORK	QUOTE ASSET
SOLANA	TAO
LAUNCH	RELATIONSHIP
06 SEP 2026	INDEPENDENT

LAUNCH SUPPLY 1.00B Current supply can fall through burns	TRANSFER FEE 3% Token-2022 reward mode	PRIMARY MARKET BUTT/TAO Raydium on Solana	MINT AUTHORITY NONE Verified onchain	FREEZE AUTHORITY NONE Verified onchain
--	---	--	---	---

01 60-SECOND EXPLANATION

A MEME WITH REAL MARKET MECHANICS.

BUTT is an independent Solana memecoin built around the Bittensor narrative. Its main market uses the Solana representation of TAO as the quote asset, and its transfer-fee model can distribute TAO automatically to eligible holders.

What makes it unusual: the meme, the paired asset and the reward token are connected, but they are not interchangeable. Understanding each layer matters more than the joke.

NOT **Official Bittensor.** BUTT is community-made and unaffiliated.

NOT **A TAO receipt.** One BUTT is not redeemable for a fixed amount of TAO.

NOT **Passive profit.** Rewards can be smaller than taxes, fees and price losses.

NOT **A fixed USD relationship.** BUTT can lose value against TAO while TAO rises.

02 THE BUTT / TAO MARKET

PAIRING DEFINES THE MONEY USED TO TRADE.

TAO is the quote asset in the Raydium pool. Pool reserves and the exchange rate move with every trade.

BUY BUTT
TAO enters the pool while BUTT leaves it for the buyer.
TAO IN / BUTT OUT

SELL BUTT
BUTT returns to the pool while TAO leaves it for the seller.
BUTT IN / TAO OUT

DISPLAYED USD RELATIONSHIP
TAO per BUTT x TAO / USD = BUTT / USD
A TAO rally helps only if the BUTT-to-TAO exchange rate does not fall enough to offset it. Pairing creates exposure, not a guaranteed price floor.

03 WHY TRADERS PAY ATTENTION

MECHANIC / 01 TAO QUOTE Every primary pool trade values BUTT directly against bridged TAO rather than SOL or USDC.	MECHANIC / 02 AUTO REWARDS A 3% transfer fee funds TAO payouts to eligible balances without staking or claiming.	MECHANIC / 03 TAO DISCOVERY The meme can introduce Solana traders to TAO and create another place where it is used.	MECHANIC / 04 BUY + BURN A separate StonkFun flywheel can buy and burn BUTT while it remains top-ranked.
---	---	--	---

IMPORTANT: the TAO reward flow and the BUTT buyback-and-burn flow are different mechanisms funded by different fee streams. Neither guarantees a positive return.

04 LIVE DATA - CHECK WHEN VIEWING

COMMUNITY SITE Buttensol > Identity + explanation	TOKEN DASHBOARD StonkFun > Market + rewards + burns	REWARD RECORDS Payouts > TAO distributions	ONCHAIN MINT Solscan > Supply + authorities
---	---	--	---

THREE FLOWS. VERY DIFFERENT EFFECTS.

The trade pair, holder reward loop and burn flywheel should be analyzed separately.

05 AUTOMATIC TAO REWARD PATH

ACTIVITY CAN BECOME TAO DISTRIBUTIONS.

BUTT TRANSFER

A buy, sale or wallet transfer moves BUTT under Token-2022 rules.

→

3% WITHHELD

The configured transfer fee is collected in BUTT at the token-account level.

→

HARVEST + CONVERT

StonkFun collects withheld tokens and funds the quote-asset reward cycle.

→

TAO TO HOLDERS

Eligible wallets receive a pro-rata share automatically when a distribution runs.

No stake or claim: documented payouts arrive directly to eligible wallets.

Eligibility: StonkFun currently applies a USD 20 minimum at the distribution snapshot.

Costs: the platform discloses an approximate 2.5% operating/network deduction from the reward process.

06 SUPPLY CONTROLS

ONE BILLION WAS THE CEILING.

1.00B

NO MINT OR FREEZE AUTHORITY

BUTT began with one billion tokens. The ordinary mint authority is now null, while current supply can decline through burns. Use Solscan for the changing live figure.

STRONG CONTROL

No ordinary post-launch minting or account freezing through the current mint authorities.

WATCH THIS

The transfer-fee configuration and withheld-fee authorities are still populated onchain.

07 SEPARATE BURN FLYWHEEL

PLATFORM FEES CAN BUY + BURN BUTT.

V3 POOL FEES

A share enters StonkFun's ecosystem flywheel.

>

TOP-10 WEIGHTING

Eligible tokens are weighted by market-cap rank at each tick.

>

OPEN-MARKET BURN

BUTT is bought and permanently destroyed while eligible.

Variable, not promised forever: BUTT stops receiving this flow if it falls outside the platform's qualifying rankings, and the platform rules can change.

08 LAUNCH LIFECYCLE

CURVE - GRADUATION - LOCKED LAUNCH LIQUIDITY.

01

LAUNCHLAB CURVE

BUTT started on a Raydium constant-product bonding curve with no token vesting recorded.

>

02

TAO THRESHOLD

The launch record shows graduation after approximately 37,667 TAO was raised.

>

03

RAYDIUM CPMM

The market graduated and its original liquidity position uses Raydium Burn & Earn locking.

09 WHAT TO MONITOR

REFLEXIVE MARKET

BUTT can rise or fall against TAO independently. A strong TAO market does not guarantee a strong BUTT ratio.

HIGH FRICTION

The 3% transfer fee sits alongside pool trading fees and slippage, raising the hurdle for every round trip.

REWARD DEPENDENCE

Payouts require activity, conversion, platform operations and eligible balances. Rewards can shrink or pause.

NEW + UNOFFICIAL

BUTT has no Bittensor affiliation, formal utility roadmap or claim on the underlying network.
