

MEME / STOCK TOKEN PAIR / ROBINHOOD CHAIN

BONER

BONER COIN

A ONE-BILLION-SUPPLY COMMUNITY MEMECOIN WHOSE MAIN MARKET IS QUOTED DIRECTLY IN HIMS STOCK TOKENS RATHER THAN ETH OR A STABLECOIN.

NETWORK	TYPE
ROBINHOOD CHAIN	ERC-20 MEMECOIN
MAIN PAIR	LAUNCH
BONER / HIMS	20 AUG 2026

SUPPLY	QUOTE ASSET	MARKET	LAUNCHER	GAS
1.00B	HIMS	UNI V4	LONG	ETH
Minted once at launch	Robinhood Stock Token	Permissionless pool	Onchain launch system	Arbitrum-based L2

01 60-SECOND EXPLANATION

A MEME WITH AN UNUSUAL QUOTE ASSET.

BONER has no separate lending app or software utility. Its distinctive feature is a main pool where traders exchange it directly against the **HIMS Stock Token**.

Key distinction: holding BONER is not holding HIMS, and neither token makes its holder a shareholder of Hims & Hers Health.

WHAT MAKES THE PAIR UNUSUAL

- 01 **Buy BONER:** HIMS Stock Tokens enter the pool while BONER leaves it.
- 02 **Sell BONER:** BONER returns to the pool while HIMS Stock Tokens leave it.
- 03 **Thin wrapper:** pool demand can temporarily reshape where the limited Stock Token supply sits.

02 BONER / HIMS MARKET FLOW

TWO RESERVES. OPPOSITE DIRECTIONS.

03 WHAT BONER CURRENTLY REPRESENTS

MEME / 01	SUPPLY / 02	MARKET / 03	ECONOMICS / 04
COMMUNITY IDENTITY	FIXED CEILING	HIMS ANCHOR	CREATOR FEES
The brand and HIMS pairing create the token's culture, attention and shared narrative.	One billion tokens were minted once; the verified implementation has no ongoing mint function.	The main pair makes HIMS Stock Token liquidity part of BONER's market structure.	LONG identifies a project-controlled fee receiver; holders receive no automatic share.

IMPORTANT: no formal governance, staking yield, automatic holder revenue share, burn program or separate protocol utility is currently documented.

04 LIVE DATA - CHECK WHEN VIEWING

LAUNCH + FEES	MAIN POOL	TOKEN LEDGER	STOCK TOKEN
LONG >	DEX Screener >	BONER Explorer >	HIMS Live >
Chart, supply + receiver	Reserves + live trades	Supply, holders + transfers	Supply, markets + flow

THE POOL SQUEEZED A WRAPPER.
IT DID NOT SQUEEZE THE STOCK.

The historic dislocation was real onchain, but it occurred inside a small Stock Token market while the underlying equity remained separate.

05 LAUNCH SUPPLY

ONE BILLION MINTED INTO THE LAUNCH SYSTEM

Creator premint allocation

None recorded

Initial launch + liquidity path

Full supply

The creation transaction minted the supply to the Airlock, then routed almost all BONER into the v4 launch pool. No creator vesting schedule was recorded.

SUPPLY FIXED-CEILING VIEW

1B INITIAL AND CURRENT BONER SUPPLY

NO ONGOING MINT FUNCTION

The verified implementation lets holders burn their own tokens but exposes no public mint after initialisation. Fixed supply alone does not create value.

Check [live supply + holders](#) >

HOLDER ECONOMICS Supply is clean; value rights are limited.	Team income: LONG displays trading fees claimed by the disclosed project fee receiver and treasury wallet.	Holder income: no automatic fee share, dividend, staking reward or treasury claim is currently documented.
---	---	---

06 HISTORICAL WRAPPER SQUEEZE

THIN ISSUANCE MET 24/7 PERMISSIONLESS DEMAND.

SMALL HIMS SUPPLY
The onchain Stock Token float was tiny while primary issuance and the underlying US market were constrained.

→

BONER BUYS POOL HIMS
At one timestamp, BONER liquidity held about 81% of the HIMS Stock Tokens then issued.

→

WRAPPER PREMIUM
Thin ordinary HIMS markets briefly printed far above the reference share price before supply and arbitrage returned.

Not a stock squeeze: there was no evidence that NYSE short sellers were forced to cover; the actual equity was unaffected.

Not permanent scarcity: authorised participants can mint or redeem Stock Tokens, and pool trades can reverse the reserve flow.

07 RIGHTS + PROJECT STATUS A TRANSPARENT MEME - NOT A SHAREHOLDER INSTRUMENT. Reviewed September 2026. No formal product roadmap or governance milestones were published at the time of research.		
HIMS RIGHTS	Stock Token: Robinhood describes it as a tokenised debt security providing economic exposure without shareholder rights.	
PRIMARY SUPPLY	Authorised participant: ordinary users cannot mint or redeem directly with the issuer; HIMS supply can still expand or contract.	
LIVE PROJECT	Community operation: the official X account, pool dashboard and disclosed team treasury are active; future utility is not documented.	

08 WHAT TO MONITOR NARRATIVE + VOLATILITY With no fundamental utility, demand can collapse as quickly as attention arrived.	POOL + QUOTE RISK Liquidity is reversible, and a HIMS wrapper premium can distort BONER's displayed dollar value.	ISSUER + LEGAL RISK Stock Token rights, eligibility, custody and primary issuance depend on external regulated entities.	TEAM + TECHNOLOGY The fee receiver and treasury are controlled, while a new L2, v4 hook and fresh token add contract risk.
